

Maple Vila was founded in June of 1972 in La Paz, Canelones, Uruguay focusing its activities in the production of molded fiber. We develop our own technology, molds and procedures, with national labor and our own ideas.

## Our company

Always looking to improve quality, services and costs, we are continuously modifying and extending our product line offering egg cartons, dividers for fruit and bottles in great variety. After years working in the national market, Maple Vila Ltda. was recognised by the DINAMA as a company with no environmental impact because all our products are biodegradable. We count with experience export and we are looking to expand ourselves to new markets.

POTS

## Our history

Maple Vila Ltda. was created in June 1972 by Américo Vila, his wife and sons, after they evaluated the future prospects of molded fiber industry. Until then, molded fiber packaging was being imported from South Africa and in smaller amounts from the United States, since there was no industry in Uruguay to produce it. In that year the first machine was bought and with inventive desire to succeed and a lot of faith, We started working. The first machine was completely manual and had very low performance. Nowadays, we count with automated processes, which have multiplied the production capacity, more than 50 times in comparison with our beginnings. Years later, Americo Vila delegates responsibility to his sons, Ana and Carlos Vila. A third generation, also joined the family business and bought new machinery to produce more demanding products.

## Our mission

We are committed to protect and distinguish our clients products, during storing, distribution and presentation. Caring for the environment, interests of society and our employees needs.

## Our vision

Expand the markets and our product line. Capture the whole national demand and conquest new markets.

## GROWING DAY BY DAY

Capacitation, technology, design, project implementation and more than 40 years of experience allow us to satisfy with excellence the markets needs and produce packaging with particular qualities.
